

# EXEDE WiFi MODEM

The Exede WiFi Modem, currently available in many areas, includes a built-in wireless router, Ethernet router and an integrated Exede Voice adapter for optional home phone service. By combining a modem, wireless router, Ethernet router and a phone adapter into a single device, we're reducing the clutter in your home while simplifying your experience.

The WiFi Modem is available for just \$5/month additional on any plan. Maximize your internet experience with Boost 25 for speeds up to 25 Mbps available in certain areas for an additional \$10/month.\*

## What's Inside the Exede WiFi Modem

1. **Modem.** This is the primary device you need for your Exede Internet service. The modem connects to the satellite dish on the outside of your home via a coaxial cable.
2. **Wireless Router.** A router is what enables you to share your service among multiple connected devices. Instead of a stand-alone unit that requires a cable between the router and modem, this router is built into the Exede WiFi Modem, and it enables you to create a WiFi network in your home.
3. **Exede Voice Adapter.** If you have home phone service with Exede Voice, you no longer need a separate adapter to connect to your phone or base station — it's included in the modem. If you don't have our home phone service, the Voice Adapter is ready to go if you ever decide you'd like to add it.
4. **4-port Gigabit Ethernet router.** If you prefer to connect your computers, laptops or other devices with an Ethernet cable, the Exede WiFi Modem has 4 ports available. Gigabit Ethernet means that when you are transferring files between devices plugged into the Exede WiFi Modem, they'll transfer as fast as a gigabit per second.

## More About the Wireless Router

The wireless router is built right into the WiFi Modem, so you don't have to buy a separate device. In addition, we'll offer technical support for it.

## Router Features

- » Selectable dual band frequency 2.4 GHz or 5 GHz connections
- » Supports WiFi types 802.11 a/b/g/n
- » Wireless security: Supports WPS, WEP and WPA security standards
- » Guest network capability
- » Basic parental controls
- » Provides WiFi coverage in typical medium sized home (approx. 1500 to 2500 sq. ft.) when centrally located.

The router built into the WiFi Modem reduces clutter and makes creating a WiFi network in your home a snap. The integrated router allows you to connect multiple devices to your Exede service: including computers, tablets, smartphones, TVs and connected-home devices like thermostats and security cameras.
